Chapter 1. Product Information

Before using this product, read and understand the safety information in Appendix C. Safety on page 21.

IMPORTANT! We recommend reading the entire user manual before beginning any protocols.

About this guide

This user manual provides guidelines and protocols to use the RNAscope® 2.5 HD Detection Kit – RED (Cat. No. 322360). RNAscope® Assays are compatible with a variety of sample types.

You must use both an RNAscope® Detection Kit user manual and a Sample Preparation and Pretreatment user manual to perform the entire assay.

IMPORTANT! For Part 1, Formalin-Fixed Paraffin-Embedded (FFPE) Sample Preparation and Pretreatment User Manual, see Document No. 322452-USM.

Visit www.acdbio.com/technical-support/user-manuals to download a sample preparation user manual.

Product description

Background

The RNAscope® Assays use a novel and proprietary method of in situ hybridization (ISH) to visualize single RNA molecules per cell in samples mounted on slides. RNAscope® Assays do not require the RNA-free environment used for traditional ISH. The assays are based on ACD’s patented signal amplification and background suppression technology. Compared with the RNAscope® 2.0 Assay, the 2.5 Assay incorporates an additional signal amplification step, which enhances the signal for low expressing genes and RNA present in archived samples and partially degraded specimens.

Overview

The RNAscope® Assay procedure is illustrated in Figure 1 on page 6. The procedure can be completed in 7–8 hours or conveniently divided over two days. Most of the RNAscope® Assay reagents are available in convenient Ready-To-Use (RTU) dropper bottles and provide a simple, nearly pipette-free workflow. Starting with properly prepared tissue samples, sections are first pretreated, and then RNA-specific probes are hybridized to target RNA. The signal is amplified using a multi-step process, followed by hybridization to horseradish peroxidase (HRP)- or alkaline phosphatase (AP)-labeled probes and detected using a chromogenic substrate. Each single RNA transcript appears as a distinct dot of chromogen precipitate visible using a common bright field microscope at 40–100X magnification. The RNAscope® 2.5 Assay has additional amplification steps that allow observable results under 10–20X magnification. RNAscope® 2.5 Assays offer the choice of two Detection Reagents: Brown (DAB) and Red (Fast Red), which enable RNA molecules to be visualized as brown or red chromogenic dots, respectively.
Figure 1. Procedure overview

Start with properly prepared sections and pretreat to allow access to target RNA.

Hybridize gene-specific probe pairs to the target mRNA.

Probes are hybridized to a cascade of signal amplification molecules, culminating in binding of HRP- or AP-labeled probes. The 2.5 Assay enhances signal further with additional amplification steps. Add DAB or Fast Red substrate to detect target RNA.

Visualize target RNA using a standard bright field microscope.

Kit contents and storage

The RNAscope® 2.5 Assay requires the RNAscope® Probes and the RNAscope® Detection Kit. Probes and Detection Kits are available separately.

RNAscope® Probes

Each probe is sufficient for staining ~20 sections, each with an area of approximately 20 mm x 20 mm (0.75” x 0.75”). Larger tissue sections will result in fewer tests. The probes have a shelf life of two years from the date of bulk manufacturing when stored as indicated in the following table:

<table>
<thead>
<tr>

RNAscope® 2.5 HD Reagent Kit – RED

Each RNAscope® 2.5 HD Reagent Kit – RED (Cat. No. 322350) provides enough reagents to stain ~20 tissue sections, each with an area of approximately 20 mm x 20 mm (0.75” x 0.75”). Larger tissue sections will result in fewer tests. Each kit contains components: Pretreatment Reagents, Target Retrieval Reagents, Wash Buffer Reagents, and Detection Reagents.

**IMPORTANT!** Directions on using the Pretreatment Reagents are included in separate sample preparation and pretreatment user manuals.

The reagents have a shelf life of nine months from the date of bulk manufacturing when stored as indicated in the following table:

<table>
<thead>
<tr>
<th>Pretreatment Reagents ((Cat. No. 322300 and 322000))</th>
</tr>
</thead>

**IMPORTANT!** RNAscope® HD RED and BROWN Reagent Kits share the same Pretreatment Reagents (Hydrogen Peroxide, Target Retrieval, and Protease Plus) and Wash Buffer, but have unique Detection Reagents. Do not interchange the reagent components of the Detection Kits, even though they have the same name.
Required materials and equipment

The following materials and equipment are needed to perform the RNAscope® 2.5 Assay.

HybEZ™ Hybridization System

**IMPORTANT!** The RNAscope® 2.5 Assay has been verified using this system only.

The HybEZ™ Hybridization System (110 VAC, Cat. No. 310010; 220 VAC, Cat. No. 310013) is designed for the hybridization and incubation steps in the RNAscope® 2.5 Assays. Incubation steps in the RNAscope® 2.5 Assay require humid conditions to prevent sections from drying out.

For instructions on how to use the HybEZ™ Hybridization System, refer to the HybEZ™ Hybridization System User Manual available at [http://www.acdbio.com/documents/support-documents](http://www.acdbio.com/documents/support-documents) and view the training video at [http://www.acdbio.com/technical-support/learn-more](http://www.acdbio.com/technical-support/learn-more). The system contains the following components:

### Component | Quantity | Cat. No.
--- | --- | ---
HybEZ™ Oven (110 or 220 VAC) | 1 oven | 310010 or 310013
HybEZ™ Humidity Control Tray (with lid) | 1 tray | 310012
HybEZ™ Slide Rack (20 slide capacity) | 1 rack | 310014
HybEZ™ Humidifying Paper | 2 sheets | —
HybEZ™ Humidifying Paper Pack | 15 sheets | 310015

**User-supplied materials**

**IMPORTANT!** Do not substitute other materials for the EcoMount listed in the following table.

### Description | Supplier | Cat. No.
--- | --- | ---
Gill’s Hematoxylin I | American Master Tech Scientific/MLS* | HXGHE1LT
Xylene | Fisher Scientific/MLS | X3P-1GAL
Tissue-Tek® Vertical 24 Slide Rack | American Master Tech Scientific/MLS | LWSRA24
Tissue-Tek® Staining Dish (3 required) | American Master Tech Scientific/MLS | —
Tissue-Tek® Clearing Agent Dish, xylene resistant (1 required) | American Master Tech Scientific/MLS | LWT4456EA
95% Ethanol (EtOH) | American Master Tech Scientific ALREACS | —
EcoMount (required) | Biocare | EM897L
Cover Glass, 24 x 50 mm | Fisher Scientific/MLS | 12--545-F
Ammonium hydroxide, 28–30% | Sigma-Aldrich/MLS | 320145-500mL
Carboy (>3L) | MLS | —
Water bath or incubator, capable of holding temperature at 40 +/- 1°C | MLS | —
Pipettors and tips, 1–1000 µL | MLS | —
Distilled water | MLS | —
 Tubes (various sizes) | MLS | —
Fume hood | MLS | —

* Major Laboratory Supplier in North America. For other regions, please check Catalog Numbers with your local lab supplier.
Chapter 2. Before You Begin

**IMPORTANT!** For Part 1, Formalin-Fixed Paraffin-Embedded (FFPE) Sample Preparation and Pretreatment User Manual, see Document No. 322452-USM.

Prior to running the RNAscope® 2.0 Assay on your samples for the first time, we recommend that you:

- View the video demonstrations available at [http://www.acdbio.com/technical-support/learn-more](http://www.acdbio.com/technical-support/learn-more).
- Run the assay on FFPE RNAscope® Control Slides (Cat. No. 310045 for Human control slide, HeLa; Catalog No. 310023 for Mouse control slide, 3T3) using the Positive and Negative Control Probes.

**Important procedural guidelines**

- Start with properly fixed and prepared sections. Refer to Appendix A. Tissue Pretreatment Recommendation on page 18 and to our sample preparation and pretreatment user guides available at [http://www.acdbio.com/technical-support/user-manuals](http://www.acdbio.com/technical-support/user-manuals).
- Use only samples mounted on SuperFrost Plus® Slides (Fisher Scientific; Cat. No. 12-550-15).
- Follow the recommended pretreatment guidelines for your sample. Refer to our sample preparation and pretreatment user guides available at [http://www.acdbio.com/technical-support/user-manuals](http://www.acdbio.com/technical-support/user-manuals).
- Always run positive and negative control probes on your sample to assess sample RNA quality and optimal permeabilization.
- Do not substitute required materials. Assay has been validated with these materials only.
- Follow the protocol exactly for best results.
- Do not let your sections dry out during the procedure.
- Use good laboratory practices and follow all necessary safety procedures. Refer to Appendix C. Safety on page 21 for more information.
Chapter 3. RNAscope® 2.5
Assay

IMPORTANT! For Part 1, Formalin-Fixed Paraffin-Embedded (FFPE) Sample Preparation and Pretreatment User Manual, see Document No. 322452-USM.

This procedure flows directly from sample preparation and pretreatment. Refer to the appropriate sample preparation and pretreatment user manual for your specific sample type.

# Materials required for the assay

## Materials provided by RNAscope® 2.5 HD Detection Kit – RED
- RNAscope® Wash Buffer (50X)
- RNAscope® 2.5 AMP 1
- RNAscope® 2.5 AMP 2
- RNAscope® 2.5 AMP 3
- RNAscope® 2.5 AMP 4
- RNAscope® 2.5 AMP 5 – RED
- RNAscope® 2.5 AMP 6 – RED
- RNAscope® 2.5 Fast RED-A
- RNAscope® 2.5 Fast RED-B

## Materials provided by RNAscope® Probes
- Target Probe
- Positive Control Probe
- Negative Control Probe

## Other Materials and Equipment
- Prepared sections
- Distilled water
- Carboy (>3L)
- Fume hood
- Xylene
- Tissue-Tek® Staining Dish (3)
- Tissue-Tek® Clearing Agent Dish, xylene-resistant (1)
- Gill’s Hematoxylin I
- Ammonium hydroxide, 28–30%
- Graduated cylinder
- Parafilm
- HybEZ™ Humidifying System
- Water bath or incubator
- Tissue-Tek® Vertical 24 Slide Rack
- Tubes (various sizes)
- Paper towel or absorbent paper
- Pipettors and tips, 1–1000 µL
- Dry oven
- EcoMount
- Cover Glass, 24 mm x 50 mm

## Prepare the materials

You may prepare the reagents at the same time you prepare pretreatment reagents. Refer to a sample preparation and pretreatment user manual available at [http://www.acdbio.com/technical-support/user-manuals](http://www.acdbio.com/technical-support/user-manuals). Some of the materials may be prepared in advance and stored at room temperature.

### Prepare 1X Wash Buffer

1. Prepare 3 L of 1X Wash Buffer by adding 2.94 L distilled water and 1 bottle (60 mL) of RNAscope® Wash Buffer (50X) to a large carboy. Mix well.  
   **Note:** Warm RNAscope® 50X Wash Buffer up to 40°C for 10–20 MIN before preparation.  
   1X Wash Buffer may be prepared ahead of time and stored at room temperature for up to one month.

### Prepare counterstaining reagents

1. In the fume hood, prepare 50% Hematoxylin staining solution by adding 100 mL Gill’s Hematoxylin I to 100 mL distilled water in a staining dish.  
   **Note:** 50% Hematoxylin staining solution can be reused for up to 1 week.
2. In the fume hood, prepare 0.02% (w/v) Ammonia water (bluing reagent) by adding 1.43 mL of 1N Ammonium Hydroxide to 250 mL distilled water in a graduated cylinder or other container.
3. Seal the cylinder with parafilm. Mix well 3–5 times.
   **Note:** For assay quantitation, it is critical to use Ammonium Hydroxide.

### Prepare mounting reagents

**IMPORTANT!** Do not reuse deparaffinization reagents for dehydration of the slides after the assay.

1. In the fume hood, add ~200 mL xylene to a clearing agent dish.
   **Note:** Reagents may be prepared ahead of time. Ensure all containers remain covered.

### Equilibrate reagents

1. Remove AMP 1–6 reagents from refrigerator and place at RT.
2. Ensure HybEZ™ Oven and prepared Humidity Control Tray are at 40°C.
3. Before each use, warm the Target and/or Control Probes for at least 10 MIN at 40°C in a water bath or incubator. Swirl gently to mix.

### Run the assay

**IMPORTANT!** Do NOT let sections dry out between incubation steps. Work quickly and fill barrier with solutions.

**IMPORTANT!** View the wash step video at [http://www.acdbio.com/technical-support/learn-more](http://www.acdbio.com/technical-support/learn-more) before proceeding.

### Hybridize probe

**IMPORTANT!** Ensure probes are prewarmed to dissolve any precipitation prior to use.

1. Tap and/or flick to remove excess liquid from slides. Place slides in the HybEZ™ Slide Rack located in the HybEZ™ Humidity Control Tray. Add ~4 drops of the appropriate probe to entirely cover each section.
   **Note:** Refer to Appendix B. Reagent Volume Guidelines on page 20 to determine the recommended number of drops needed per slide. For example, for a 0.75” x 0.75” barrier add 4 drops of the appropriate probe.
2. Cover the HybEZ™ Humidity Control Tray with lid and insert into the oven for 2 HRS at 40°C.
   **IMPORTANT!** To prevent evaporation, make sure the turn nob is completely turned to lock position.

3. Remove the HybEZ™ Control Tray from the oven and remove HybEZ™ Slide Rack.
4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT. Agitate slides by moving the slide rack up and down in the dish.
6. Repeat Step 5 with fresh 1X Wash Buffer.

### Hybridize AMP 1

1. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid from slides. Place slides in the HybEZ™ Slide Rack in the HybEZ™ Humidity Control Tray. Add ~4 drops of AMP 1 to entirely cover each section.
2. Close tray and insert into the oven for 30 MIN at 40°C.
3. Remove the HybEZ™ Control Tray from the oven and remove HybEZ™ Slide Rack.
4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT with occasional agitation.
6. Repeat Step 5 with fresh 1X Wash Buffer.

Hybridize AMP 2

1. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid from slides. Place slides in the HybEZ™ Slide Rack in the HybEZ™ Humidity Control Tray. Add ~4 drops of AMP 2 to entirely cover each section.
2. Close tray and insert into the oven for 15 MIN at 40°C.
3. Remove the HybEZ™ Control Tray from the oven and remove HybEZ™ Slide Rack.
4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT with occasional agitation.
6. Repeat Step 5 with fresh 1X Wash Buffer.

Hybridize AMP 3

1. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid from slides. Place slides in the HybEZ™ Slide Rack in the HybEZ™ Humidity Control Tray. Add ~4 drops of AMP 3 to entirely cover each section.
2. Close tray and insert into the oven for 30 MIN at 40°C.
3. Remove the HybEZ™ Control Tray from the oven and remove HybEZ™ Slide Rack.
4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT with occasional agitation.
6. Repeat Step 5 with fresh 1X Wash Buffer.

Hybridize AMP 4

1. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid from slides. Place slides in the HybEZ™ Slide Rack in the HybEZ™ Humidity Control Tray. Add ~4 drops of AMP 4 to entirely cover each section.
2. Place the HybEZ™ Slide Rack in the HybEZ™ Humidity Control Tray. Close tray and insert into the oven for 15 MIN at 40°C.
3. Remove the HybEZ™ Control Tray from the oven and remove HybEZ™ Slide Rack.

**IMPORTANT!** Do not insert tray into the HybEZ™ Oven for the rest of the procedure.

4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT with occasional agitation.
6. Repeat Step 5 with fresh 1X Wash Buffer.

Hybridize AMP 5

1. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid before placing in the HybEZ™ Slide Rack. Add ~4 drops of AMP 5 to entirely cover each section.
2. Place the HybEZ™ Slide Rack in the HybEZ™ Humidity Control Tray. Seal tray and incubate for 30 MIN at RT.
3. Remove the HybEZ™ Slide Rack from the HybEZ™ Humidity Control Tray.
4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT with occasional agitation.
6. Repeat Step 5 with fresh 1X Wash Buffer.

Hybridize AMP 6

1. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid before placing in the HybEZ™ Slide Rack. Add ~4 drops of AMP 6 to entirely cover each section.
2. Place the HybEZ™ Slide Rack with the slides in the HybEZ™ Humidity Control Tray. Close tray and incubate for 15 MIN at RT.
3. Remove the HybEZ™ Slide Rack from the HybEZ™ Humidity Control Tray.
4. One slide at a time, quickly remove excess liquid and place slide in a Tissue-Tek® Slide Rack submerged in the Tissue-Tek® Staining Dish filled with 1X Wash Buffer.
5. Wash slides in 1X Wash Buffer for 2 MIN at RT with occasional agitation.
6. Repeat Step 5 with fresh 1X Wash Buffer.

**IMPORTANT!** Staining intensity can be modified by adjusting the AMP 5 incubation time.

Detect the signal

1. Briefly spin down the contents of the Fast RED-B tube to be sure content is at the bottom of the tube before opening the cap.
2. Depending on the size of your hydrophobic barrier, prepare sufficient RED working solution per section by using a 1:60 ratio of Fast RED-B to Fast RED-A. For example, for a 0.75” x 0.75” barrier, add 2 µL of Red B to 120 µL of Red A into a tube. Mix well.

**IMPORTANT!** Use the Fast RED-B solution within 5 MIN. Do not expose to direct sunlight or UV light.

3. Take each slide one at a time from the Tissue-Tek® Slide Rack and tap and/or flick to remove the excess liquid before placing in the HybEZ™ Slide Rack.
4. Pipette ~120 µL RED solution onto each tissue section. Ensure sections are covered.
5. Place the HybEZ™ Slide Rack with the slides in the HybEZ™ Humidity Control Tray. Seal tray and incubate for 10 MIN at RT.
6. Remove the HybEZ™ Slide Rack from the HybEZ™ Humidity Control Tray.
7. To remove the RED working solution from the slides, tilt each slide one at a time over a waste container and tap the corner on the edge of the container. Immediately insert the slide into a Tissue-Tek® Slide Rack submerged in a Tissue-Tek® Staining Dish filled with tap water. Rinse again with fresh tap water.

Counterstain the slides

1. Move the Tissue-Tek® Slide Rack into the staining dish containing 50% Hematoxylin staining solution for 2 MIN at RT. Slides will be purple.
2. Immediately transfer the slide rack back into the staining dish containing tap water, and wash slides 3–5 times by moving the rack up and down. Keep repeating with fresh tap water until the slides are clear, while sections remain purple.
3. Replace tap water in the staining dish with 0.02% Ammonia water. Move rack up and down 2–3 times. Section should turn blue.
4. Replace Ammonia water with tap water. Wash slides 3–5 times.

**Mount the samples**

1. Remove the slide rack from the staining dish and dry slides in a 60°C dry oven for at least **15 MIN** (until slides completely dry).

**IMPORTANT!** The RED substrate is alcohol sensitive. Do not dehydrate the slides in alcohol.

2. Briefly dip one slide into fresh pure xylene and *immediately* place 1–2 drops of EcoMount on the slide before the xylene dries.

**IMPORTANT!** Use the EcoMount mounting medium only.

3. Carefully place a 24 mm x 50 mm coverslip over the tissue section. Avoid trapping air bubbles.
4. Repeat steps 2 and 3 for each slide.
5. Air dry slides for **≥5 MIN**.

**Evaluate the samples**

Examine tissue sections under a standard bright field microscope at 20–40X magnification:

- Assess tissue and cell morphology.
- Assess positive control signal strength. Positive control signal should be visible as punctate dots within cells at 20–40X magnification.
- Assess negative control background. One dot to every 10 cells displaying background DAB staining per 20X microscope field is acceptable.
- Evaluate target probe signal using the scoring guidelines in the next section.

**Scoring guidelines**

The RNAscope® Assay can enhance the value of *in situ* hybridization results by enabling a semi-quantitative scoring guideline utilizing the estimated number of punctate dots present within each cell boundary. An example on how to develop such a guideline for semi-quantitative assessment of RNAscope® staining intensity is presented below for a gene with expression level varying between 1 to > 10 copies per cell. If your gene expression level is higher or lower than this range, you may need to scale the criteria accordingly.

Categorize staining into five grades: 0, 1+, 2+, 3+, and 4+ according to the following table:

<table>
<thead>
<tr>
<th>Staining Score</th>
<th>Microscope Objective Scoring*</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No staining or less than 1 dot to every 10 cells (40X magnification)</td>
</tr>
<tr>
<td>1</td>
<td>1–3 dots/cell (visible at 20–40X magnification)</td>
</tr>
<tr>
<td>2</td>
<td>4–10 dots/cell. Very few dot clusters (visible at 20–40X magnification)</td>
</tr>
<tr>
<td>3</td>
<td>&gt;10 dots/cell. Less than 10% positive cells have dot clusters (visible at 20X magnification)</td>
</tr>
<tr>
<td>4</td>
<td>&gt;10 dots/cell. More than 10% positive cells have dot clusters (visible at 20X magnification)</td>
</tr>
</tbody>

Quantitative image analysis

RNAscope® Spot Studio Software is designed for pathologists with no prior training in image analysis. This intuitive software allows users to obtain statistical results with complete information of cell-count/region and number of spots/cell. Simply load any image, select a region of interest, define settings, and run analysis, followed by a quality control review before results are exported. Further information is available on our website at www.acdbio.com.

Control examples

Figure 2 is an example of human liver cancer sections using dapB Negative Control Probe and PPIB Positive Control Probe at 40X magnification.

**Figure 2.** RNAscope® 2.5 HD Detection Kit – RED performed on human liver cancer sections using the dapB Negative Control Probe (Cat. No. 310043) and PPIB Positive Control Probe (Cat. No. 313901), 40X magnification.

Troubleshooting

For troubleshooting information, please contact technical support at support@acdbio.com.
Appendix A. Tissue Pretreatment Recommendation

Follow the recommended pretreatment conditions based on your tissue type for:

- Any new or previously untested FFPE tissue types
- Samples prepared differently than the sample preparation protocol found in Part 1, Formalin-Fixed Paraffin-Embedded (FFPE) Sample Preparation and Pretreatment User Manual, Document No. 322452-USM.

Tissue pretreatment recommendation

1. Stain representative samples using the positive and negative control probes.
2. Fix sample in fresh 10% NBF for 16–32 HRS at RT.
   Note: Perform tissue fixation step using the recommended amount of time. Over or under-fixation will result in significant signal loss when performing the RNAscope® Assay.
3. Depending on your tissue type (see section below), vary the amount of time for the RNAscope® Target Retrieval Reagents and/or RNAscope® Protease Plus.

<table>
<thead>
<tr>
<th>Reagent</th>
<th>Mild</th>
<th>Standard</th>
<th>Extended</th>
</tr>
</thead>
<tbody>
<tr>
<td>RNAscope® Target Retrieval Reagents</td>
<td>15 MIN</td>
<td>15 MIN</td>
<td>15–30 MIN</td>
</tr>
<tr>
<td>RNAscope® Protease Plus</td>
<td>15 MIN</td>
<td>30 MIN</td>
<td>30 MIN</td>
</tr>
</tbody>
</table>

Note: Sample types such as certain Xenografts and Cell Pellets, require less time. For these tissue types, vary the RNAscope® Target Retrieval Reagents time to 8 MIN and RNAscope® Protease Plus time to 15 MIN. If you have a tissue type not listed, contact support at support@acdbio.com.

Tissue-specific pretreatment conditions

If your sample fixation is successful in fresh 10% NBF (Step 2 above), then refer to the following table for tissue-specific pretreatment conditions. For information about species or tissue type not listed here, contact support at support@acdbio.com.

* Tissue Microarray
Appendix B. Reagent Volume Guidelines

Determine reagent volume

Before starting your experiment, measure the inner edge of the hydrophobic barrier to determine the recommended number of drops needed per slide (see table below).

<table>
<thead>
<tr>
<th>Size of Hydrophobic Barrier* (in)</th>
<th>Recommended Number of Drops per Slide</th>
<th>Recommended Volume per Slide (µL)</th>
<th>Relative Template Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.75” x 0.75” †</td>
<td>4</td>
<td>120</td>
<td></td>
</tr>
<tr>
<td>0.75” x 1.0”</td>
<td>5</td>
<td>150</td>
<td></td>
</tr>
<tr>
<td>0.75” x 1.25”</td>
<td>6</td>
<td>180</td>
<td></td>
</tr>
</tbody>
</table>

* Hydrophobic barrier measured at inner edge. References in this user manual are for the 0.75” x 0.75” hydrophobic barrier size.
† Recommended hydrophobic barrier size is 0.75” x 0.75”. With this barrier size, each probe is sufficient for staining ~20 sections. Larger tissue sections will result in fewer tests.
Appendix C. Safety

Chemical safety

**WARNING! GENERAL CHEMICAL HANDLING.** To minimize hazards, ensure laboratory personnel read and practice the general safety guidelines for chemical usage, storage, and waste provided below, and consult the relevant SDS for specific precautions and instructions:

- Read and understand the Safety Data Sheets (SDSs) before you store, handle, or work with any chemicals or hazardous materials. To obtain SDSs, see [http://www.acdbio.com/technical-support/user-manuals](http://www.acdbio.com/technical-support/user-manuals).
- Minimize contact with chemicals. Wear appropriate personal protective equipment when handling chemicals (for example, safety glasses, gloves, or protective clothing).
- Minimize the inhalation of chemicals. Do not leave chemical containers open. Use only with adequate ventilation (for example, fume hood).
- Characterize (by analysis if necessary) the waste generated by the particular applications, reagents, and substrates used in your laboratory.
- Ensure that the waste is stored, transferred, transported, and disposed of according to all local, state/provincial, and/or national regulations.

**IMPORTANT!** Radioactive or biohazardous materials may require special handling, and disposal limitations may apply.

Biological hazard safety

**WARNING! BIOHAZARD.** Biological samples such as tissues, body fluids, infectious agents, and blood of humans and other animals have the potential to transmit infectious diseases. Follow all applicable local, state/provincial, and/or national regulations. Wear appropriate protective equipment, which includes but is not limited to: protective eyewear, face shield, clothing/lab coat, and gloves. All work should be conducted in properly equipped facilities using the appropriate safety equipment (for example, physical containment devices). Individuals should be trained according to applicable regulatory and company/institution requirements before working with potentially infectious materials. Read and follow the applicable guidelines and/or regulatory requirements in the following:

In the U.S.:

- U.S. Department of Health and Human Services guidelines published in Biosafety in Microbiological and Biomedical Laboratories found at: [www.cdc.gov/biosafety](http://www.cdc.gov/biosafety)
• Occupational Safety and Health Standards, Bloodborne Pathogens (29 CFR§1910.1030),
  found at: www.access.gpo.gov/nara/cfr/waisidx_01/%2029cfr1910a_01.html
• Your company’s/institution’s Biosafety Program protocols for working with/handling
  potentially infectious materials.
• Additional information about biohazard guidelines is available at: www.cdc.gov/

In the EU:

• Check local guidelines and legislation on biohazard and biosafety precaution and refer to
  the best practices published in the World Health Organization (WHO) Laboratory
  Biosafety Manual, third edition, found at:
• Information about the Registration, Evaluation, Authorisation and Restriction of Chemicals
  (REACH) can be found at: http://echa.europa.eu/regulations/reach
Obtaining SDSs

Safety Data Sheets (SDSs) are available at: http://www.acdbio.com/technical-support/user-manuals. For the SDSs of chemicals not distributed by Advanced Cell Diagnostics, contact the chemical manufacturer.

Obtaining support

For the latest services and support information, go to: http://www.acdbio.com/technical-support/support-overview

At the website, you can:

- Access telephone and fax numbers to contact Technical Support and Sales facilities.
- Search through frequently asked questions (FAQs).
- Submit a question directly to Technical Support.
- Search for user documents, SDSs, application notes, citations, training videos, and other product support documents.
- Find out information about customer training events.
